

SaaS Business Analytics — Executive Report

Data Analyst / Business Analytics portfolio case study

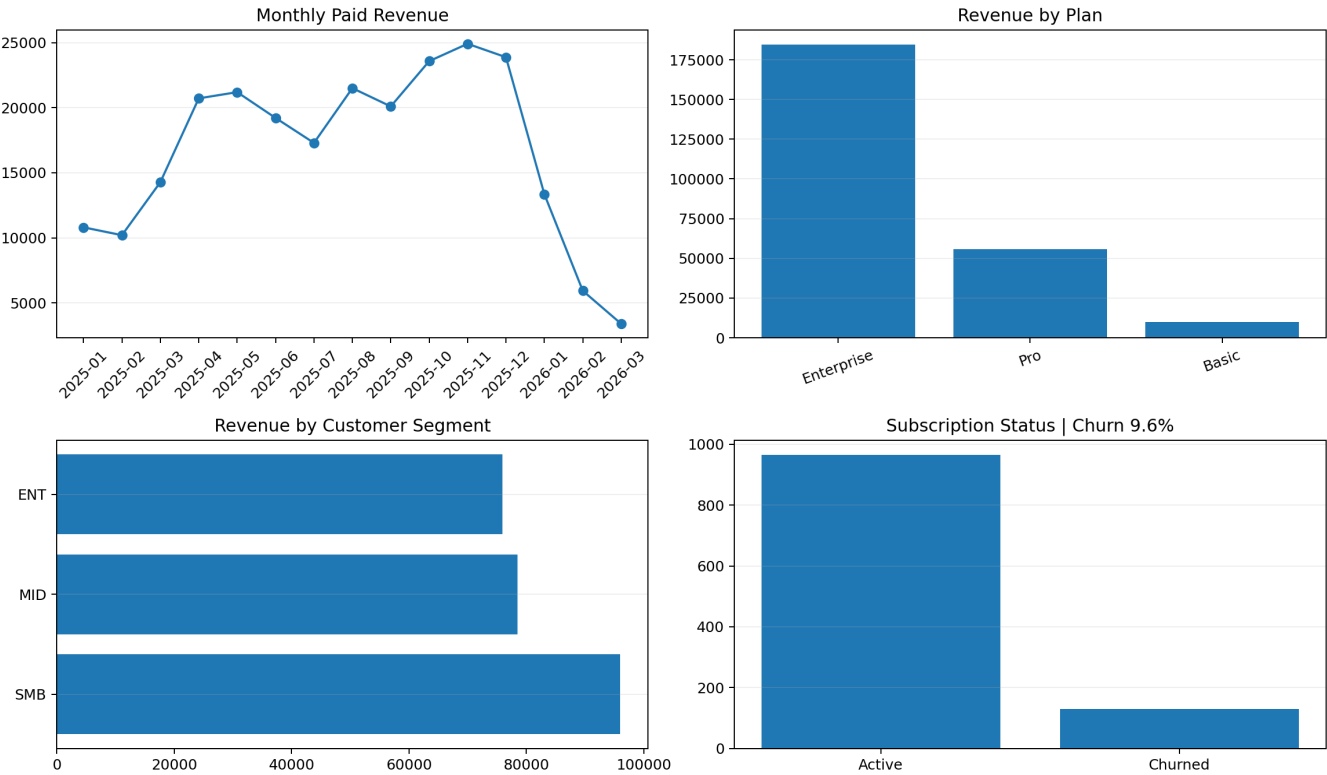

KPI	Value
Paid Revenue	250,380.00
Refund Value	120,983.00
Net Collected Revenue	256,091.00
Active Subscriptions	965
Churn Rate	9.57%
Top-10 Revenue Share	6.98%

Business interpretation

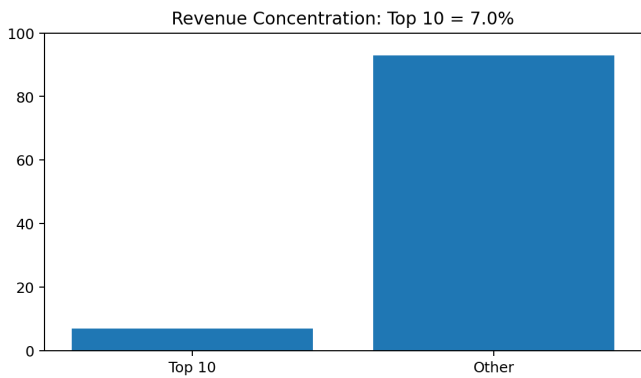

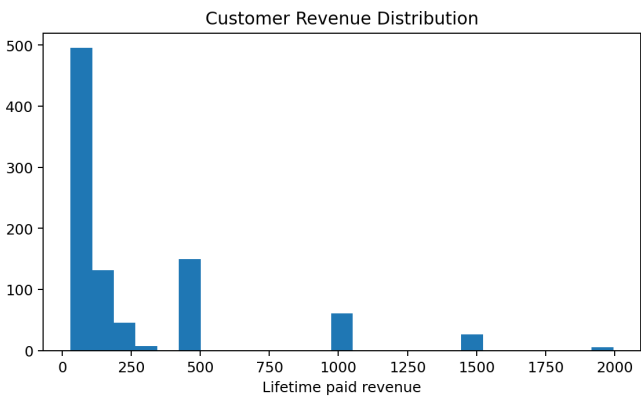

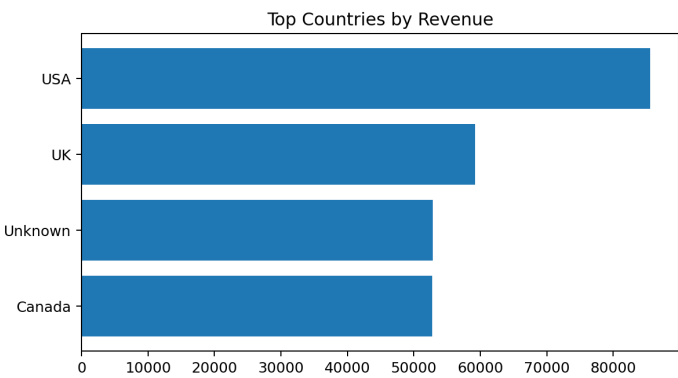

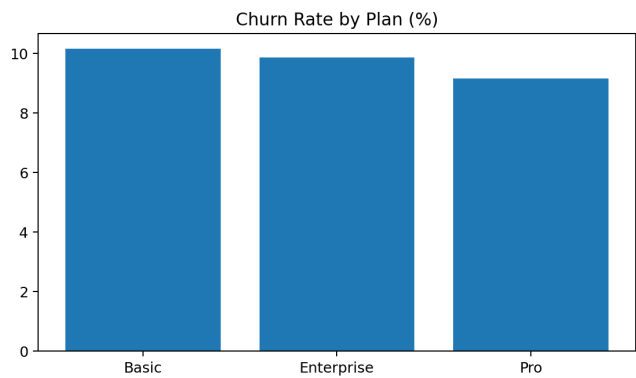

- Paid revenue in the supplied cleaned dataset is 250,380.00. - Refund value is 120,983.00, so net collected revenue is 256,091.00. - There are 965 active and 130 churned subscriptions; observed subscription churn is 9.57%. - The top 10 customers contribute approximately 6.98% of paid revenue, making customer concentration a useful management monitoring metric. - The dashboard separates commercial performance (revenue), customer health (churn), product behavior (usage) and service operations (support) so business questions can be investigated across functions.

Interpretation rule These are descriptive findings from the supplied dataset. They do not establish causal relationships; product usage, support activity and churn should be investigated with cohort analysis or controlled analysis before claiming causation.
